Halfe length of the day		Pole 51	Pole 52	Pole 53	Pole 54	Pole 55	Pole 56	Halfe length of the night	

Januarie hath xxxi. dayes.

Now wily *Hermes* ioyne with furious *Mars*,
And *Mars* with *Venus*, these three errant stars
Gue vs an item of some hidden stormes,
And boystrous weather, if no further harmes.
Through naughty diet, many men will fall,
And *Hermes* pupill's portion is but small.

The forraigne,
or beyond-Sea
Accept.

Aprill hath xxx. dayes.

Why doth it raine so oft, I pray thee tell,
 And why from heauen, doe fall such stormes of hayle?
 Cause for our Sinnes we neither weepe nor moune.
 The heauens themselues for vs to teares, doe turne.
 Purge, bleed, take Phisicke, if thou wouldst preuent,
 Thy bodyes sicknesse, and thy soales, repent.

The first night,
 or beyond Sea
 Accompt.

May hath xxxi. dayes.

Last May wee had an Eclipse of the Sun,
And since that time an other of the Moone,
And now Apollo's neere the Pleiades.
And maskt Diana, with old Saturne playes.
These great defects doe bode no danger small,
To Men, to earth, to Cattle, fruite, to all.

The forraigne,

July hath xxxi. daies

Venus and Mars, now farre though seldome scene,
And Leo in Sols Chariot drawes the Queene.
Of night, and Procyon's heate is great, and Ioue
With Hermes squares; These will disturbance moue.
Within this brittle, fickle ball of earth
And turne to Elegies, our former minth.

August hath xxxi. dayes.

The roaring Lion, and the mad Dogges rage,
This moneth doth terminate and their heate asswage.
Yet Esculapius, Bacchus, Venus thun,
Lest (then too late) thou esteest I am vndon.
Embrace thou cooling drinckes, vse slender diet,
If long on earth thou mean'st to live in quier.

September hath xxx. dayes.

Now *Venus* arme in Arme linkt with her foe,
 I meane old *Saturne*, whom shee nere could brooke,
 Vainemen in halt, thus runne vpon their woe.
 When they vpon a *Curtezan* doe looke,
Rome's great & potent State did neuer shrinke,
 Till they began to wench, to coach, and drinke.

December hath dayes. xxii.

Mars doth with Sol, Hermes with Jove combine
 And each the other doth aspekt by Tryne
 Thus many vnder zealous habits maske,
 Hunt after Sermons, haunt each heavenly taske:
 But marke them well, their Charitie is small,
 Their Friendship lesse, their Actions worst of all.

The forraigne

								day a quarter		
								past noone.		
								Moist and raine		
								with snoevie		
								weather.		

A briefe and necessary explanation of the eight
seuerall Columnes in the Almanacke; with
the vse thereof for this yeare.

The first is the dayes of the moneth.
The second the dayes of the weeke. **B** be-
ing Sunday letter.

The third containeth Saints dayes, with
vs vsed in England, and the moueable feasts. As like-
wise the passions and places of the 7 planets, whereby
the industrious may learne to know them. A Planet is
said to be orientall, when hee may be seene in the mo-
ning before Sunne rise. But Occidentall, when
hee appeareth after Sun set. As the 2 day of Ianuary ♄
(Saturne) is Orientall, whereby I conclude him to bee
a morning Starre, or to be seene before the Sunne bee
risen, ♃ (Iupiter) Occidentall, an euening Starre, or
to be seene after Sun set. And so for any the rest. That
Colunne hath the rising and setting of some notable fix-
ed Stars, which the Planets and Moones coniuncti-
on with them against the dayes on which they happen,
both pleasant and vlesfull.

The fourth Colunne is the place of the Moone; or
(as wee say) the signe and degree shee is in every day
at noone.

The fifth, the coniunctions and aspects of the Moone
to the Planets; as likewise of the Planets among
themselves. As for example the first of Ianuary I finde
these Characters: $\text{♄} \text{♂}$: the coniunction of Mars and
Mercury. Also the 25 day I finde $\text{♃} \text{♄}$ the coniunction
of Iupiter and the Moone: and so of the rest.

The sixt is the Change, full, and quarters of the ☾ ,
with the inclination of the weather in every quarter
throughout the yeere.

A Prognostication.

The two last columns are in vse for those that would know the Roman or beyond Sea accompt sit for Marchants, Marriners and others.

A declaration of the fower quarters or parts of the yeare 1631, with a brieft Astrologicall Iudgement vpon each of them seuerally comprehended vnder their proper and peculiar Resolutions.

Although the best Astronomers (not without great reason) doe vsually begin the yeare in March at the circular returne of the Sun into the first scruple of Aries, yet in respect of the common custome of our English Prognosticators I not presuming to breake any such custome, will also dispose my matter after their mannes and begin the Prognosticks with the last Hiemall Astronomickall quarter of the yeare 1630. which is the first part of our new Prognostications.

Friget et humet Hyems, glacie et niue flumina stringit.
Winter.

Tooke it's beginning the last yeare 1630. vpon Saturday the 11 day of December at 5 of the clock and 20. minutes paste in the afternoone: The Sun then entering the first minute of Capricorne. At which time the 18 degree of Cancer doth ascend the house of the Moons flegmatick watery, cold and moist, aspected of Saturne from a trine in Scorpio. the house of Mars the same in nature, but most malevolent, who with Mercury and Mars are Lords of this Hiemall or Winter quarter, and in his septentrionall orientality, will cause vehement windees from the North and North-east, and oftentimes the Moone meeting with Mars and he predominating, will suddenly turne the wind to the West. which will increase raw moist and unwholsome weather, troubled ayre, thicke and pittchy cloudes, snow in abundance, with an ouerflow of waters danger by shipwracke perill to women in child birth, or losse of children. The diseases of this quarter are those proceeding of Melancholly.

chollic, the Epilepsie, falling sicknesse, madnesse, Red
poxe and some hurt to many, by venomous and butt-
full Creatures, as Caterpillers, spiders, serpents, &c.
Or by poyson, which Saturne threatneth, being in the 6
house in Scorpio, as likewise the conjunction of Mars and
the Sunne doth augment the former predictions

January.

The 15 day in the morning Saturne and the Moone
may be seene together in the 15 degree of Scorpio.

The 21 day in the morning, Mars and the Moone are
together in the first degree of Aquarius, hardly to be
seene.

The 24 day in the West after Sunne is set may the
Moone and Iupiter be seene together in the 16 degree of
Pisces.

Venus and Mercury cannot be seene.

February.

The 12 day Saturne is retrograde, and the Moone is
with him in the 17 degree of Scorpio about 4 a clocke in
the morning.

The 19 day Mars is neere the Moone in the morning,
Iupiter, Venus, and Mercury all this moneth are combust
and cannot be seene.

Ver præbet flores, calidum ver feruet et humer.

Of the Spring.

Which takes it's begining on Thursday the 10 of
March this yeare 1631. at three quarters past 5 a clocke
in the after-noon. At which time the Sun then en-
ters his exaltation, the signe of Aries making the day
and night of equall length (vnder the Poles excepted)
throughout the World. At which time likewise the 28.
degree of Virgo doth ascend in the East, the principall
house of Mercury, of an earthly cold and dry nature.
Mercury is chiefe lord of this quarter, & so consequently
of the whole yeere, with some participation of Mars, he
is unfortunately seated in the 6 house, the house of Sick-

A Prognostication.

nesse, in conjunction to Mars, in his detriment and fall retrograde &c. (all which les derniers troubles et empeschements de Mercury; and that likewise the effects of the last Eclipse of the Sun, vpon the last of May the last yeere are now in force, wherein Mercury bore greatest sway) are sufficient testimonies for vs to thinke this an extraordinary vnfortunate yeere with Mercurialis, as great Scribes, Protonotaries Secretaries, Embassadors, Marchants, Rectours, (and if you please Astronomers) with others of whom hee is Patron, by cattuity and imprisonment, vpon displeasures of their lordes and masters conceiued against them, likewise he threatneth the vnfaithfull practises of seruants towards their masters, and some notable euents thereby presaged: Likewise many sore infirmities to Infants and children, and those of young age. The disposition of the ayre is noted in the Almanacke more particularly.

Touching the diseases & infirmities that will raigne this quarter, they will be hot Agues and pestilent feauers, Inflammation of the liuer, melancholly madnesse, rottennes, consumption, the Plague, & what soeuer may spring of choller and corrupt blood: Besides some other significations which I willingly pretermit, beseeching the Almighty of his accustomed mercies to continue his fauourable blessing towards vs.

March.

The 11 day Saturne and the Moone are together in the morning.

The 20 day Mercury is direct, and the Moone may be seene with him in the 12 Degree of Pisces very early in the morning and so from him she goes to Mars.

The 21 day she appeareth neere to Iupiter.

The 23 Venus and the Moone are close, yet hardly to be discerned.

Venus is our euening Starre all this moneth.

Iupiter

Jupiter, Mars, and Mercury are morning Starres bsh-
ering the Sun in his gloze, comfortable to early risers
telling them the day is neere at hand.

Aprill.

The 7 day Saturne and the Moone rise together in
the East at 7 a clocke at night.

The 18 day Jupiter and Mars with the Moone are in
consultation betime in the morning.

The 20 day Mercury and the Moone parley.

The 23 day the Moone and Venus neere the seven
Starres may be scene neere together, very neere, after
the Sun is set.

May.

The 5 day Saturne and the Moone rise neere one a-
nother at Sun set, and so walke together all night.

The 16 day Jupiter and the Moone at three a clocke
in the morning may bee scene Southeast close by one
another.

The 17 day Mars and the Moone enter Taurus both
together very early in the morning.

The 22 day Mercury may bee scene (with a perspi-
cuous eye) with the Moone in the West at night.

The 23 day Venus and the Moone set together an
hower after Sun set.

Venus is our evening Starre all this moneth.

Of the Summer.

Aestas sicca calet, formosa est messibus &estas.

The Summer takes it's beginning vpon Saturday
the 11 day of Iune 3 quarters past 9 a clocke at night,
and then the Sun entereth the first minute of Cancer,
the 26 degree of Capricorne rising, and Venus with Mer-
cury neere the angle of the West. Saturne eleuated in the
ninth house in opposition to Mars, who governeth this
Seasonall quarter, vnsfortunately placed in the 3 house
in his detriment, will greatly increase brethren & kind-
folkes to quarrells amongst themselves, and stirre up

A Prognostication.

diuers suites and contentions. The death of some of the Clergie is hereby signified with other infortunes to men of the Church, likewise troubles and grieuances (by robbery and bloodshed) to men traueling long iournes, and shiptwack to many. The ayre will be pestiferous, with many South and South-west-windes, and sometimes Southeast, causing much heat, thunder, lightnings and other distempered weather, and the destruction of fruit and trees, the death of Cattell, &c. Iupiter by reason of his being in the second house with the Moone will bee fortunate to many by the death of their friends, as also an encrease of substance, household goods moueables, &c. through marchandise and otherwise, and these things to happen to those men that are vnder his dominion, and Aries.

The sicknesses & diseases that will raigne this quarter, will be fluxes, consumptions, the Measels, Sharpe and acute leauers, great paine in the head, and eyes, frensyes, the Pestilence, and other diseases proceeding from putrified and corrupt blood mixt with melancholly.

June.

The first day the Moone and Saturne walk together and Mars opposeth them.

The 12 day the Moone salutes Iupiter, and they both rise about one in the morning.

The 15 day Mars and the Moone are neere the seven Starrs.

The 20 day Mars passeth by the 7 Starrs, and Mercury becomes retrograde and ioynes with the Moone.

The 22 day, the Moone and Venus are together in the east.

The 28 day Saturne and the Moone are together againe.

Venus, Saturne and Mercury, are euening Starrs.

Iupiter and Mars are fore-runners of the day.

July.

July.

The 3 day Mars with the Bulls eye. And Venus with the Lyons heart are neere together.

The 10 day Iupiter and the Moone are rarely risers.

The 14 day Mars lates hold of Luna and plot together.

The 17 day the Moone findes light fingered Mercury in her pocket, and he is angry.

The 21 & 22 daies Venus and the Moone in Virgine play the wantons.

On S. Iames his day, Sol & Saturne are at hartiance, the Moone goes to comfort the old man, but all fall together by the eares.

Saturne and Venus are onely the euening Starres.

The rest are day Starres, and make ready a way for the Sun before hee be vp.

August.

The 6 day the Moone with bright Iupiter walke together all night.

The 12 day the Moone finds Mars newly entred her lodging.

The 20 day Venus with the Virgines spike welcome the Moone and walke hand in hand till 10 a clocke at night.

The 22 day the Moone attaines to Saturne, and in the dead of the night he scales from her and hides himselfe in the West.

Venus and Saturne are our euening Starrs, but leaue vs when it growes darke. But kinde Iupiter hath an eye ouer vs all this moneth euery night.

Mars is a morning Starre, Mercury hides himselfe vnder the wings of his Master.

Of the Haruest.

Musta dat Autumnus, et morbos, siccit, et alger.

The Haruest (or fall of the leafe) begins vpon Tuesday the 13 day of September 10 minutes past noone; the Sun then enters Libra equals the night with the day.

A Prognostication.

and the Scorpions heart ariseth in the East. Iupiter is Almuten of the figure in the opposition of Mercury, both are angular And although they will cause a furious conflict of windes and tempests, yet will it not be much hurtfull to things growing on the earth, some houses, buildings, and such like places shall feele the effects of this influence by being soze bzuised, battered, and broken downe. But let vs hope for a good Harvest, and second spring, for that Iupiter is fortunate in the earthen angle, and Lord of the Ascendent. Saturne and Venus toyued in the 12 house, in the worst signe and place of the heauens, giue vs an Item that many intoxications, incantations and inchauntments shall bee bled, and other wicked and vngodly practises: For which because their significations are in the 12 house, many shall suffer captiuitie: and others death, because Mars the disposer of the 12, is in the 8 house, also here is signified a further death of Cattle. The diseases of this quarter are such as were the last, but more violent.

*Astra regunt Corpus, mens libera, sidera vincit,
Est Deus in coelis, hunc cole, tutus eris.*

September.

The 1 day the Moons accompanies Iupiter through the Ramme all night.

The 10 and 11 Mars with the Moone, and Saturne with Venus play strange tricks. Si non casse tamen caute.

The 17 day Mercury, the Moone, and the Virgins spike, toyne in consultation against Iupiter and Mars.

The 18 day Saturne and the Moone make a match, but the 19 day like a wanton girle thee plaies with Venus and leaues Saturne in the lurch.

On Michaelmas day at night, the Moone and Iupiter appose the Sun full at his setting.

Saturne with Venus like an old man, jealous of his young wife, walke abroad in the euenings all this month, and by that time they goe to bed. Iupiter ap=
prates

peares glorious in the Southeast and by South.

Mars is a morning Starre all this moneth.

Mercury is an evening Starre.

October.

The 9 day Mars and the Moone may be scene by carefully risers.

The 18 day at night Venus and the Moone are to be scene in the West.

The 26 the Moone and Iupiter at 10 a clocke at night are very neere in the South Southeast.

Venus is a glorious evening Starre all this moneth.

Saturne and Mercury cannot be scene.

November.

The 6 day at noone Mars toyne with the Moone and that morning at Sun rising they are together in the South angle, and in square to Saturne, shewing men are apt to wrangle.

The 12 day Mercury and the Moone appeare in the East in the morning.

The 15 day Venus is retrograde and toyne with the Moone at night.

The 22 day Iupiter followes the Moone all night, and the 23 day the Moone followes him.

This moneth Saturne cannot be scene.

Venus sets an houre after Sun set, and vpon S. Andrews day the Sun hides her from vs.

Cæli enarrant Dei gloriam, et firmamenta eius opera.

Of Eclipses.

Four times this yeere shall the Inhabitants of the earth want the light of the Luminaries, twice of the Sun, and twice of the Moone, but neither of the Sun shall bee visible in our Hemisphere. But both of the Moone shall be apparant and plainly scene with vs of Great Brittain and the Kingdomes adiacent.

Of the first of the Sunne.

which shall happen (the 21 day of April at our 9 a clocke

A PROGNOSTICATION.

clock in the forenoon) to the people living in the South parts of the World, and in the vtmost parts of Asia at their 3 a clocke afternoone. The Luminaries then being in the 11 degree of Taurus not far from the Dragons head. The digies darkened are 3 parts of 12. And therefore being of so small a quantity, and by the reason of the much Southerne latitude of the Moone not to be seene by vs, I forbear to speake further of it.

Of the first Eclipse of the Moone.

Which shall happen in our Horizon vpon Thursday the 5 day of May at 7 minutes past 7 at night, iust at Sun set, in the 24 degree of Scorpio, the Moone a little seperated from Saturne and the Dragons tayle. The beginning will be a quarter past 5; the middle of greatest darkenesse iust as shee riseth, and the end at 9 a clocke at night from the beginning to the end will be 3 houres and a halfe, the parts darkened are 21 of 24: The colour will be very blacke. Cum luna eclipsetur in vltimo Decano Scorpionis, Oliuas destruit, aerem exiccat, febres etuolas facit, atque insuper inter mortales plurimum sedit morbo, rixis, seditionibus, cadibusque. Hæc Proclus.

Of the second of the Sunne.

Which shall happen (to the Inhabitants of the South in the vtmost bounds of Asia, and towards the East of Cathaia, the great Citie Calacia, and the mountaines of Belgian, with the circumiacent regions and countreys vnder the dominion of the great Cham vpon the 15 day of October at their 3 a clocke and 10 minutes in the afternoone) To vs at our 5 a clocke in the morning; And therefore not to be seene of vs, nor to vs appertaining. The parts darkened are iust the halfe of the Suns body, the Sunne and Moone in the first degree of Scorpio neere Anababison, or the Dragons tayle.

Of the second and last Eclipse of the Moone.

This Eclipse of the Moone, shall be seene with vs from the beginning to the end, it happeneth on Saturday

Day the 29 Day of October 3 quarters past 8 a clocke at night. The middle of greatest darknesse at a 11 of the clocke, the end of recovery of light at one a clocke the next morning. From the beginning to the end will be 4 houres and a quarter. The parts darkened are 19 of 24, and will be of as darke a colour as the former, and Saturne now doth oppole her, as before in the former Eclipse of the Moone, be toynd with her, which will much increase the former influence. This defect doth happen in the 16 grade of Taurus which according to my former authoꝝ. Satorum, seminumque sterilitatem immitit, et cuiusdam Matronæ regalis stemmatis obitum minatur.

The natures, properties and Characters of the 7 Planets. And the 12 signes.

Post *S I M*, *S V M* sequitur, proxima Luna subest.

If you will count the Planets soone,

Remember *S I M*, *S V M* next the Moone.

S. Saturnus. I. Iupiter. M. Mars. S. Sol. V. Venus. M. Mercurius. Luna.

Of Saturne.

The Planets differ from the fixed Starres diuers waies, for the fixed Starres twinkle some more, some lesse, but the Planets neuer twinkle. The fixed Stars haue one and alwaies the same habit to one another, but the Planets are obserued in diuers nights, to be more nere, or further of from the fixed Stars, and amongst themselves. So that we know Saturne by his leaden and pale swarthy colour, hee is called Saturnus a saturitate, vel quod Saturetur annis, hee is 30 yeeres in compassing the Zodiaque. And because of his great distance from the Sun, hee is of nature exceeding cold, and dry; the authoꝝ of blacke and darke weather, inundations, earthquakes, frost and snow, and if the Moone goe from him, or his aspect to the Sunne, or from the Sun to him, it is *Aperuo portarum*, causing an exceeding

A Prognostication.

ding coldnesse in the ayre (though in Summer) much raine, haile, snow, and blacke weather, and as the quarter of the yeere requireth in which it happeneth, (as you may see in a table in my last yeeres Almanacke) he ruleth the East winde; and is an vtter enemy to nature. And hath this note ζ for his character, like an old man leaning on a staffe.

Of Iupiter.

Iupitur, dictus est a iuuando, hee goeth his circuit in 12 yeeres, He is of a bright fulgent aspect; and being placed betweene, Saturne and Mars, and because of his conuenient distance from the the Sun, he is of nature temperately hot and moist, & because of his great light, he is tearmed the father of cleernesse, and producer of wholesome gales, and faire weather. Hee causeth the North winde And if the Moone go from him, or his aspect, and presently apply to Mercury, or from Mercury to him, it is Apertio portarum, and expect a mighty and vehement conflict of windes. Hee is natures best friend, and hath for his character this note Υ , as it were a man holding a scepter in his hand.

Of Mars.

Mars (quasi Mauors) quia maribus in bello præsit, He is of a most fiery red colour with obscurity, he passeth vnder the 12 signes in two yeeres, he is of an exceeding hot and dry nature, the Authoꝝ of tempests, haile, raine and thunder, heate, coruscations, fire, impressions in the ayre, and sudden alterations of the weather. He ingendereth the West winde. And if the Moone passe from him or his aspect, and immediately apply to Venus, or from Venus to him, it is Apertio portarum, and looke for showers, thunder and lightning, he is as ill as Saturne, and that you may know him, he is thus marked ♂ , as it were a batte, or some warlike weapon.

Of the Sunne.

Sol quasi solus lucens, ♄ ; is Opus et Anima mundi

(169)

hee goeth through the 12 signes every yeere, according
to that old verse : Curriculum Titan his senis mensibus
implet. He is the distinguisher of yeeres, times and sea-
sons, he is the most radiant object in the heauens, and
all other lights become darke at his approaching. Hee
alters the ayre in respect of his being in the signe, and
his configuration to the Starres fixed and errant, but
his greatest force is to cause snow, haile and hoare frosts
and meanly raine with windes, Hee is of a meane na-
ture, He is thus by the Ancients characterd ☉.

Astrorum princeps, cæli decus, orbis et Anni,
Arbiter, ad nutum tempora resq; gero.

Of Venus.

Venus a Venustatc, hee is the most brightest and cleer-
est Starre in all the firmament (the luminaries excep-
ted) she goeth her course as the Sun, shee hath by the
bulgar beene often taken for a Comet, for she is of such
a copious light, that she casts forth beames, and some-
times giueth a shadow, shee is neuer from the Sun
(ante et retro) aboue 48 degrees, for which cause she is
called his Chambermaid. If shee rise before the Sun,
shee is called the morning Starre. But if shee appears
after Sun is set she is term'd the evening or Wepheards
Starre, shee is temperately cold and moist with a little
heate, shee is the mother of raine, showes and misting,
especially in moyst signes, and she produceth the South
wind, shee is a good friend to nature, and for her char-
acter she hath this note ♀, as it were a young girlc, or a
binde of a looking=glasse.

En Soli vicina Venus nitet aurea vultu,
Commoda dat Thalami fœdera, dote bear,

Of Mercury.

Mercurius (a merce vel mercatura) goeth his course as
the Sun and Venus doth, and hee appeareth somewhat
shining, but not very bright, and by reason of his near-
nesse to the Sunne (being neuer aboue 29 degrees dis-
tance

A Prognostication.

Mercurius) he is called his secretary, and is seldome seene. He is of a mutable and changing nature, participating of the signe he is in, be it hot, cold, moist, or dry, and of the Planets with whom he is configured, properly he is the Authoꝝ of winds being in airy signes, and if he be in fiery signes and either ♀ or ♂ aspect him, he causeth sudden mutations to winde, tempests, hayle, thunder and lightning, he is thus marked & as if he had wings on his head, &c.

Mercurius tectur breuibꝫ leuis æthere gyris,
Inconstans, varius, nec statione manens.

Of the Moone.

Luna (so called) quia aliena luce luceat, shee goeth her course in 27 daies, 7 houres, and 44 minutes, or more properly euery moneth, shee is cold and moist of nature, and in respect of her light to the Sun, her aspects to the Planets, the signe shee is in, the Starres she is corporally with, her latitude and the house of the heauens shee is in, shee diuersly altereth the ayre. For shee is the earths Planet, next to it, and powreth on it the lively influence of all the heauenly bodies, shee (as shee commonly appeareth) hath this note D.

Quod maculas vultus alieno lumine tucō,
muto cuncta, marem nunc peto, nunc fugio.

Quod vaga, quod nunquam constans, vis discere causam
Fœmina sum, Vxoris forsā Imago tuæ.

Of the 12 signes of Heauen.

Of Aries.

Sunt Aries, Taurus, Gemini, Cancer, Leo, Virgo,

Libra; Scorpius, Arcitenens, Capr, Amphora, Pisces.

Astro.

**Astrologically Prouerbs, or the nature, and note of
euery day good and bad this yeere.**

God hath made all things for himselfe, and the wicked for the euill day, Prouerbs 16.4.

To euery thing there is a season, and a time to euery purpose vnder the Heauen, Eccles. Cap. 3, ver. 1, 2, 3.

Good dayes.	Ianuary.	Euill dayes.
3 More willing then powerful	1 2 An ill beginning.	
4 Not very free hearted.	5 To what purpose.	
6 A good countenance.	7 8 More hast, worse speede.	
11 Hard to obtaine.	9 There goes a whore.	
12 13 Quick dispatch.	10 More lust then loue.	
16 17 18 Better and better.	14 15 Both knaues.	
21 Kind consent.	19 A vn traydor dosaleuasas.	
23 Sollicite thy lawyer.	20 Fire and water.	
24 25 A hopefull enterprise.	22 A priuate parle.	
26 27 It bodes good luck.	28 29 Crosse carding.	
	30 Guarda medios dems.	
	31 In a browne study.	

Good dayes.	February.	Euill daies.
1 The motion is liked.	5 6 7 Might against right.	
2 Vulneratus non uictus.	11 12 13 Ride not to deepe.	
3 4 Perfect friendship.	18 19 Scilla & Charibdis.	
8 9 10 Better would doe well.	20 It will not be found.	
14 With labour it may.	25 26 Take heed of drowning	
15 16 17 Mutuall concor	27 Froward and fretfull.	
21 Speake and spare not.	28 Mischiefe intended.	
22 23 24 Loue with labour.		

A Prognostication.

Good daies.

March.

Evill daies.

- 1 It will be better.
- 2 3 4 Some princely fauour.
- 9 10 Willing but for want.
- 11 12 13 Highly promoted.
- 14 15 17 Thy Lord affects thee.
- 19 Better is toward.
- 21 As thou wouldst haue it.
- 23 All that may be.
- 26 27 Sticke to it close.
- 29 All for thy good.
- 31 It cottens well.

- 5 Little streames little mills.
- 6 Trust him not.
- 7 8 Thwart and angry.
- 11 Musing of mischiefe.
- 14 15 Look to your locks.
- 18 Coughs and obstructions.
- 20 Take heed of a lash.
- 22 Thou wilt repent.
- 25 A dead reckoning.
- 28 Harme watch harme catch
- 30 *Sol ne occidat super iram ve-*
stram.

Good daies.

April.

Evill daies.

- 8 Slip not thy occasion.
- 9 10 No great deniall.
- 12 Victory in the end.
- 15 16 17 A happy chance.
- 22 Shee is thine owne.
- 23 24 Thine owne by law.
- 26 27 Better aduised.
- 30 Spare to speak spare to
speede.

- 1 As mute as a herring.
- 3 4 A hempen halter.
- 5 6 A brazen face.
- 7 8 An ould fornicator.
- 11 Much adoe, little sport.
- 13 14 An Eele by the tayle.
- 18 19 Beware a stabbe.
- 20 21 Toyle to no purpose.
- 25 Ancient enemies.
- 28 He will turne Turke.
- 29 Familiarity breeds con-
tempt.

Good daies.

May.

Evill daies.

- 1 A friend in a corner.
- 3 Kindly imbraced.
- 6 *Aurora nups amica.*
- 7 8 Kisse to be had.
- 9 Warne blood.

- 3 A rope and a halter.
- 4 In a deepe melancholly.
- 5 Earely vp & neuer the neer
- 10 False within.
- 11 Two to one.

Bowker 1631.

13 14 The world is mending.
 15 16 A wise man cannot bee
 poore.
 20 She will stand fast.
 23 Shee is better then her
 word.
 24 good passage.
 27 good counsell.
 29 30 honourable speeches.

12 *Simile non est idem.*
 17 Stay your quaffing.
 18 Meddle not with edge
 tooles.
 19 Cowardly practises.
 21 22 Worse and worse.
 25 26 Time ill spent.
 28 Beware your limmes.
 31 Scarce cator cousines.

Good daies.

June.

Evill daies.

23 A gallant minde.
 5 6 The latter end better.
 8 9 10 Old and young loue
 thee.
 12 A good spirit.
 13 14 A quick dispatch.
 16 17 18 Good lucke at last.
 20 Be ruled by him.
 22 23 Make Hay while the
 Sunne shines.
 24 25 Hope helps heavy
 hearts.
 30 To his power.

1 Pell mell.
 4 Thy cap at the Moone.
 7 Looke your drink be good.
 11 Saue thy labour.
 15 Strong and subtil foe.
 19 The fat in the fire.
 21 Faire show false heart.
 26 Combersome enough.
 27 *Ex nihilo, nil fit.*
 28 Lose a friend get an ene-
 mie.
 29 Meddle not at all.

Good daies.

July.

Evill daies.

1 Earely is best.
 4 5 6 *Sine Numine nihil.*
 8 9 All things to nothing.
 10 11 *Sapit qui sibi sapit.*
 13 Not amisse.
 15 An euill foreseene halfe
 cured.
 16 17 Plucke vp thy spirits.
 20 Coy yet constant.

2 *Cito, longe, Tarde.*
 3 A Iewish tricke.
 7 Over the left shoulder.
 12 Alas poore fellow.
 14 The gallows grones.
 18 A Crow in the Corne.
 19 You count your chickens
 before they be hatcht.
 22 Repeat at leasure.

A Prognostication.

21 A friend of a hundreth.
23 It falls out par.
26 27 Play the good husband
29 30 At a dead list.

24 All is dash't.
25 A common Ass's worst
saddled.
28 At open defiance.
31 A meere Cheator.

<i>Good daies.</i>	<i>August.</i>	<i>Euill daies.</i>
3 Spare for no cost.	1 At latter lammas.	
5 6 7 There is no dallying.	2 Fooles make feasts and and wise men eate them.	
10 11 As sure as check.	4 His wits are breecht.	
13 14 15 Through the briers.	8 9 In a heavy case.	
18 She staves for thee.	12 At daggers drawing.	
20 A wily wench.	16 17 Out of his element.	
21 A girle of fiftene.	19 Bread and a serpent.	
24 25 In an excellent humor.	22 23 Thy suite is cold.	
27 Set a good face on't.	26 A false alarum.	
29 30 All friends.	28 A bad bargaine.	
	31 Water in a Sieue.	

<i>Good daies.</i>	<i>September.</i>	<i>Euill daies.</i>
3 4 Better hopes then before	1 Thou mayst goe whistle,	
6 7 On the wining side.	2 Quite of the hookes.	
9 Hardly preuailing.	5 Busie about nothing.	
13 At better Ieasure.	8 A bow too short.	
14 Winke at small faults.	10 Bless'e thee from him.	
19 Vpon further liking.	11 Two faces vnder one hood	
20 21 The towne is ours.	12 An idle iourney.	
24 25 Cut and chuse.	15 16 Shifts will not serue.	
23 27 No study to profit.	17 18 Play nor the foole by halves.	
28 29 Nothing venture no- thing winne.	22 Gape after gudgeons.	
	23 <i>Fas alys quod vis tibi.</i>	
	30 A chollerick caitiffe.	

Bowker. 1631.

-

The vse of the Table in the second Column of the
 Almanacke; intituled, a true, perfect, easie, and per-
 petuall Table whereby to know the length of the day
 and night, Sun rising and setting, for euery
 day in theyeere, for any place with-
 in this Kingdome of Great
 Brittain.

The Table is diuided into 14. generall Columns.
 The 4. Columns on the left hand containe the
 Moneth and day of the Moneth, vpon which day
 is noted the houre and minute of Sunne set, and the
 halfe length of the day, in that place vnder which it is
 (the 6. following Columns fitted to 6 generall places:
 as London, Lecester, Manchester, Durhams, Edinburrow,
 St. Andrewes, and will serue to any Towne, or place in
 this Kingdome in the same paralell East and West)
 The foure Columns on the right hand containe the
 moneth and day of the moneth, vpon which dates is
 noted the hower of Sun rise, and the halfe length of
 the night. Know that an houre hath 60 minutes in it,
 45 minuts is three quarters, 30 minuts halfe an houre,
 and 15 is a quarter.

Example.

Bowker. 1631.

Example.

The 12. of Iune vnder the place Manchester and the Pole 53 I finde 8 22. 8 houres 22 minutes which is the time of Sun set, that being doubled is 16 houres, 44. minutes is the length of the night. That 8 houres and 22 minutes taken from 12, there resteth 3 houres 38 minutes the houre of Sun rising, which 3 houres 38 minutes doubled is 7. houres, 18 minutes the length of the night.

Again.

The 12 of December (for the same place) I finde 2. houres 27. minutes the time of Sun rising, which doubled is the length of the night, being 16 houres 14 minutes. That 8 houres 22. taken from 12 leaueth 3. houres 38. minutes, the houre of Sunne set, which 3 houres 38. minutes doubled is the length of the day, being 7 houres 16 minutes, so for any day in the yeere.

An easie way to know the time of the Tyde, or full Sea in all the Portes and Hauens vnder named.

Obserue that the day of New Moone, and full Moone it is full Sea at London Bridge at 3. of the clocke, the day of the first and last quarter, at 8 a clocke 24. minutes. Now for any day after those quarters, or for so many daies after them you adde so many times 48 minutes, you shall haue the time of full Sea. As for example, the 8 of Iannary it is full Moone, and therefore full Sea at London Bridge, at 3 a clocke. The next day I adde 48. minutes, which makes three houres 48 minutes, and so for the rest. Again the 14. day it is last quarter. And therefore full Sea at 8 a clocke 24 minutes at London Bridge, for the next day I adde 48 minutes and it makes 9 houers 12 minutes. And so for any day.

A Prognostication.

New Moone. Full Moone.		First Quarter. Last Quarter.
12	0 Quake. Southampton, Portsmouth.	6 24
12	45 Aberdeen, Rochester, Maidon.	7 9
1	30 Gravesend, Downs, Romney.	7 54
2	15 Dundee, S. Andrewes, Lisbon.	8 19
3	0 London, Tinnouth, Amsterdam.	8 24
3	45 Barwick, Scarborough, Flushing.	10 9
4	30 Frith, Leith, Dunbar, Bloy.	10 54
5	15 Falmouth. Seuernemouth, Garnsey.	11 39
6	0 Linne, Humber, Plimouth, Anwerp.	12 24
6	45 Bristol Lanion, Foulness.	1 9
7	30 Milford, Bridgewater, Exwater.	1 54
